

# POP - Porto Office Park

Porto, Portugal

## Project Description

Porto Office Park was recently built in the Central Business District between the airport and the city centre of Porto. With a total of almost 31,500 m<sup>2</sup>, the building comprises numerous facilities: Apart from an auditorium, several meeting rooms and modern office space, it is also home to gastronomy.

The Office Park combines sustainability, design and comfort – and is BREEAM certified. Lindner products contribute greatly to this: The LIGNA raised floor system installed in the building consists of raw materials with the lowest possible emission values. The approximately 24,500 m<sup>2</sup> of raised floor allow easy maintenance and servicing of installations in the floor cavity.

In addition to the floor system, 2,000 m<sup>2</sup> of expanded metal ceilings were also supplied by Lindner. These are manufactured environmentally friendly and resource-saving. The special ceilings integrate ideally into the modern interior design.

## Completed Works

- **Floors**

Chipboard panels  
LIGNA

24500 sqm

- **Ceilings**

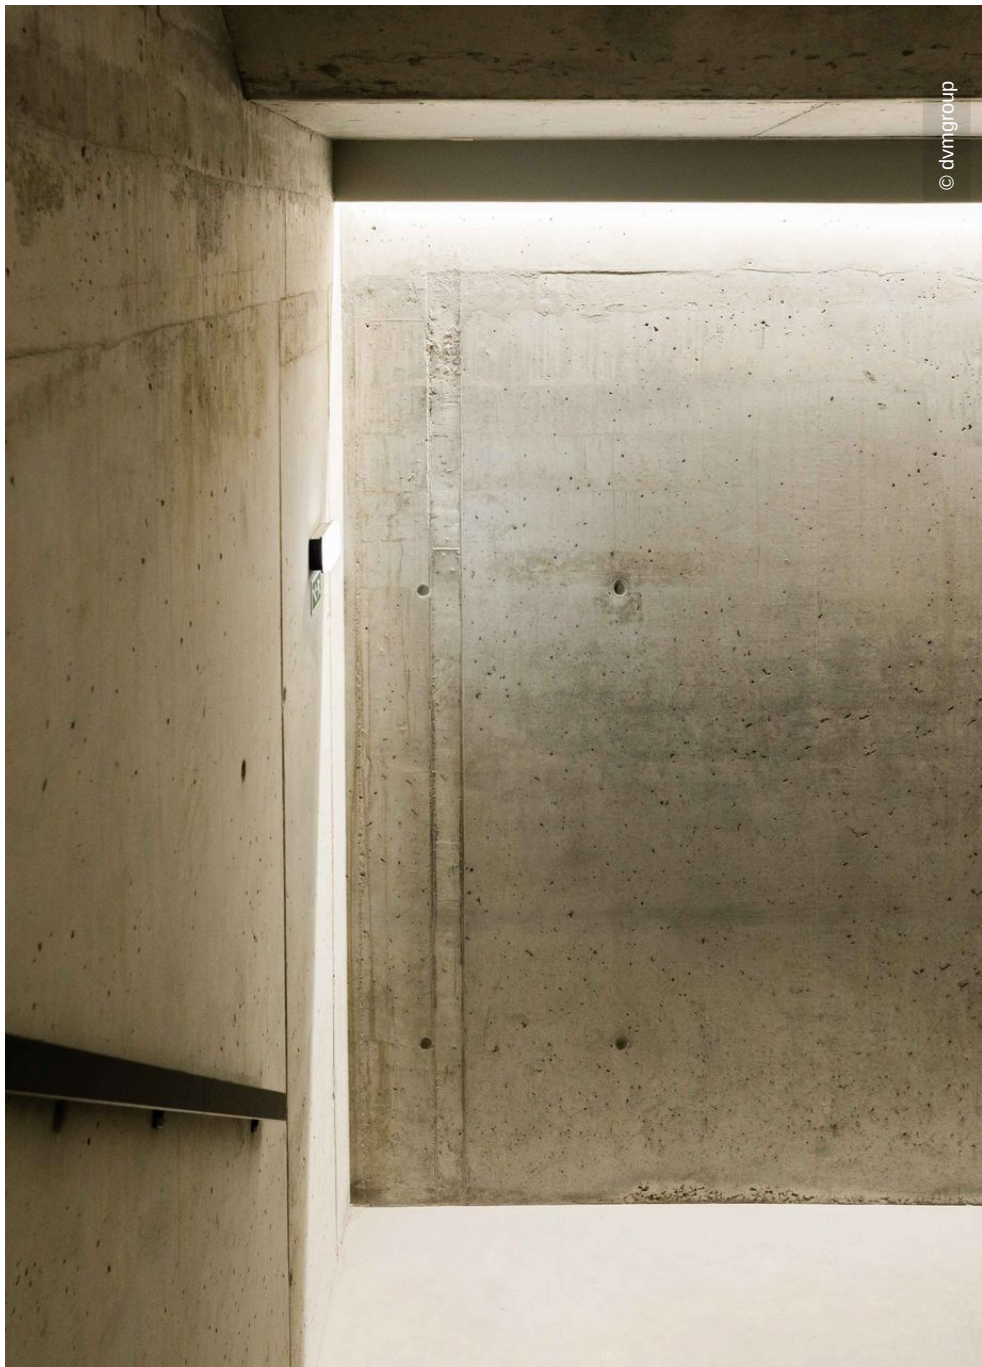

Expanded Metal Ceilings  
LMD-St 312

2000 sqm
