

Lindner ECO_N® Hybrid Element Facade

A Powerful Unity made out of Wood and Aluminum

The Lindner ECO_N® is the first hybrid facade in our range of unitised facades and, thanks to the combination of timber modules and aluminum, fuses economy with sustainability. By using wood, we not only create a visual link to nature: The CO₂-neutral wood also has a very positive effect on the ecological balance of the facade. With ECO_N, we also rely on single source materials with the highest recyclability and continue the proven basic design of our hybrid facades: The facade system impresses with clear sealing and functional levels, patented PA pressure strip and special fire protection properties. The system can also be installed quickly and on-time on the construction site thanks to the use of prefabricated, high-quality facade elements.

- Patented spring clip mounting
- Patented PA pressure strip
- Visible width outside: 3 1/8" (80 mm) [2 x 1 1/4" (32.5 mm) faceplate + 5/8" (15 mm) joint]
- Visible width inside: 3 1/8" (80 mm) wood/aluminum design or 4" (100 mm) wood design
- Very good thermal and moisture resistance
- Integration of aluminum or wood-aluminum opening elements
- Optional features can be integrated, such as LED modules or various joint designs
- Compatible with the Lindner ECO® aluminum system and therefore adaptable to different room uses (e. g. wet rooms)
