

# DryTile

## Carreaux céramiques autoportants avec couche de liège en dessous

DryTile is a highly effective laying method for ceramic surfaces which enables a dust-free laying of tiles. They can be used immediately on a smooth surface, ideally FLOOR and more® dry hollow floor. Only 12 to 24 hours after tiling and jointing, the surface is ready to carry loads.

A layer of cork is applied to stone panels or ceramic tiles of all sizes at the factory creating a dry tile. Primer and adhesive are replaced by the cork layer on the reverse side and therefore DryTile can be laid up to eight times faster. Closing times are reduced and construction processes are optimised. The cork also acts as an effectively acoustic decoupling from the underground. Furthermore, a circumferential tile edge ensures the predefined alignment of the panels to a joint width of 3 mm.

DryTile offers extremely quick installation without waiting times and a very high area efficiency. At the same time, this convenient laying method reliably guarantees an optimum result.

- ceramic tile with cork coating at bottom side
- emission- and dust-free laying for clean indoor air
- elastic cushioning of the tiles due to a patented decoupling back structure
- low-risk and ergonomic laying of large format tiles
- can be revised at any time in case of change of use or subsequent installations
- unlimited range of decors
- acoustic and structural decoupling from underground (13 - 18 dB reduction of impact sound pressure level)

### Domaines d'intervention

**Magasins:** Banques, Musées, Surface de vente, Salle de concert, Lieux de réunion, Centres commerciaux, Salle de Cinéma/ du Théâtre

**Travail:** Salle de séjour, Salle de réunion, Locaux techniques, Immeuble de bureaux, Radio, Scènes

**Éducation:** Universités, Écoles, Bibliothèque

**Institution publiques:** Palais de Justice, Bâtiments Gouvernementaux

**Zones de circulation:** Entrée, Couloirs nécessaires

**Transport:** Aéroports, Gares, Métros et Tunnels

**Hôtels:** Restaurants

**Santé:** Cliniques et hôpitaux

**Habitation**

### Exigences techniques

**Hygiène:** Nettoyage par aspiration, Essuyable, Désinfection antibactérienne, Désinfection virucide

**Statique:** Praticabilité, Sécurité sismique, Charge Lourde

**Conception:** Peinture, Perforation

**Climatisation:** Perméabilité à l'air, Ventilation, Chauffer et refroidir

**Technique de sécurité:** Electrostatique, Protection Antivol, Radioprotection

**Protection contre la corrosion:** Intérieur

**Durabilité:** Déclaration Environnementale de Produits

**Protection incendie:** Comportement au feu

### Données techniques

EN 51130 2014	EN 51130 2014	R 9 R 10
---------------	---------------	-------------

épaisseur		depending on the ceramic tile
Longueur		available in different lengths
Largeur		available in different widths
Construction		ceramic tile with cork coating at bottom side
