

QZP Pendant Luminaires – The Bright Spark for Glare-Free Design

The QZP pendant luminaire is the ideal solution for any areas with particularly high lighting requirements.

Its micro-lens cell grid, available in classic white or black, not only creates impressive lighting moments but also guarantees glare-free illumination and even light distribution thanks to its low UGR (Unified Glare Rating). Additionally, it meets the standards of the DIN EN 12464-1 norm, which regulates workplace lighting. This standard is especially important for areas such as offices and meeting rooms, where high concentration and visual precision are essential. Furthermore, the optional DALI (Digital Addressable Lighting Interface) system allows for flexible light control—whether bright lighting for focused work or dimmed lighting for relaxing moments.

Depending on the project or lighting line requirements, the QZP pendant luminaire can be manufactured in both standard lengths and custom dimensions. Cell grids and blind inserts can also be alternated to ensure optimal illumination.

The QZP pendant luminaire adapts perfectly to spatial conditions and specific lighting needs. Aesthetically, the light fits seamlessly into any interior style: the powder-coated steel housing is available in various RAL colours.

The delivery of the luminaires includes steel cables, connection cables, and a ceiling canopy for straightforward and time-saving installation.

Equipped with LED technology, the QZP pendant luminaire not only meets the high lighting demands of modern work environments but also contributes to the building's energy efficiency.
