

DR Byen - Danish Radio

Copenhagen, Denmark

Project Description

Lindner was part of the project to build one of the most modern and momentous concert halls in the world. Our core competence in building concert halls, theatres and auditoria contributed extensively to the new architectural landmark in Denmark where Lindner was responsible for the interior fit-out of the office areas, the concert halls, the small studios, the foyer and the queens lounge. Lindner also fitted partitions-, ceilings- and raised floor systems.
