

Modernisation of Otto Headquarters

Hamburg, Germany

© www.Lindner-Group.com

Project Description

The Otto Headquarters have been based in an office building on Bramfelder Campus in Hamburg since 1982. Lindner was the general contractor responsible for the complete fit-out during the refurbishment of these company headquarters. After the complete stripping down to the shell, both the implementation of all building services and the execution of all interior-fit works were performed from one source. In-house expertise of our Lean Construction Management department ensured a punctual outcome in terms of time and quality.
