

Boardinghouse Wertheim

Wertheim, Germany

Project Description

The apartment buildings in Wertheim, built in container construction, are business accommodations with an excellent price-performance ratio. In serial construction 21 containers were prefabricated in the factory of the container manufacturer with the Underfloor Heating System NORIT-TE 30 Therm GF.

The advantages of the NORIT-Heating System, such as a quick installation and accessibility due to the dry construction, were ideally complemented by container room modules. Significant advantages of modular construction, paired with NORIT-products.
