

POP - Porto Office Park

Porto, Portugal

Project Description

Porto Office Park was recently built in the Central Business District between the airport and the city centre of Porto. With a total of almost 31,500 m², the building comprises numerous facilities: Apart from an auditorium, several meeting rooms and modern office space, it is also home to gastronomy.

The Office Park combines sustainability, design and comfort – and is BREEAM certified. Lindner products contribute greatly to this: The LIGNA raised floor system installed in the building consists of raw materials with the lowest possible emission values. The approximately 24,500 m² of raised floor allow easy maintenance and servicing of installations in the floor cavity.

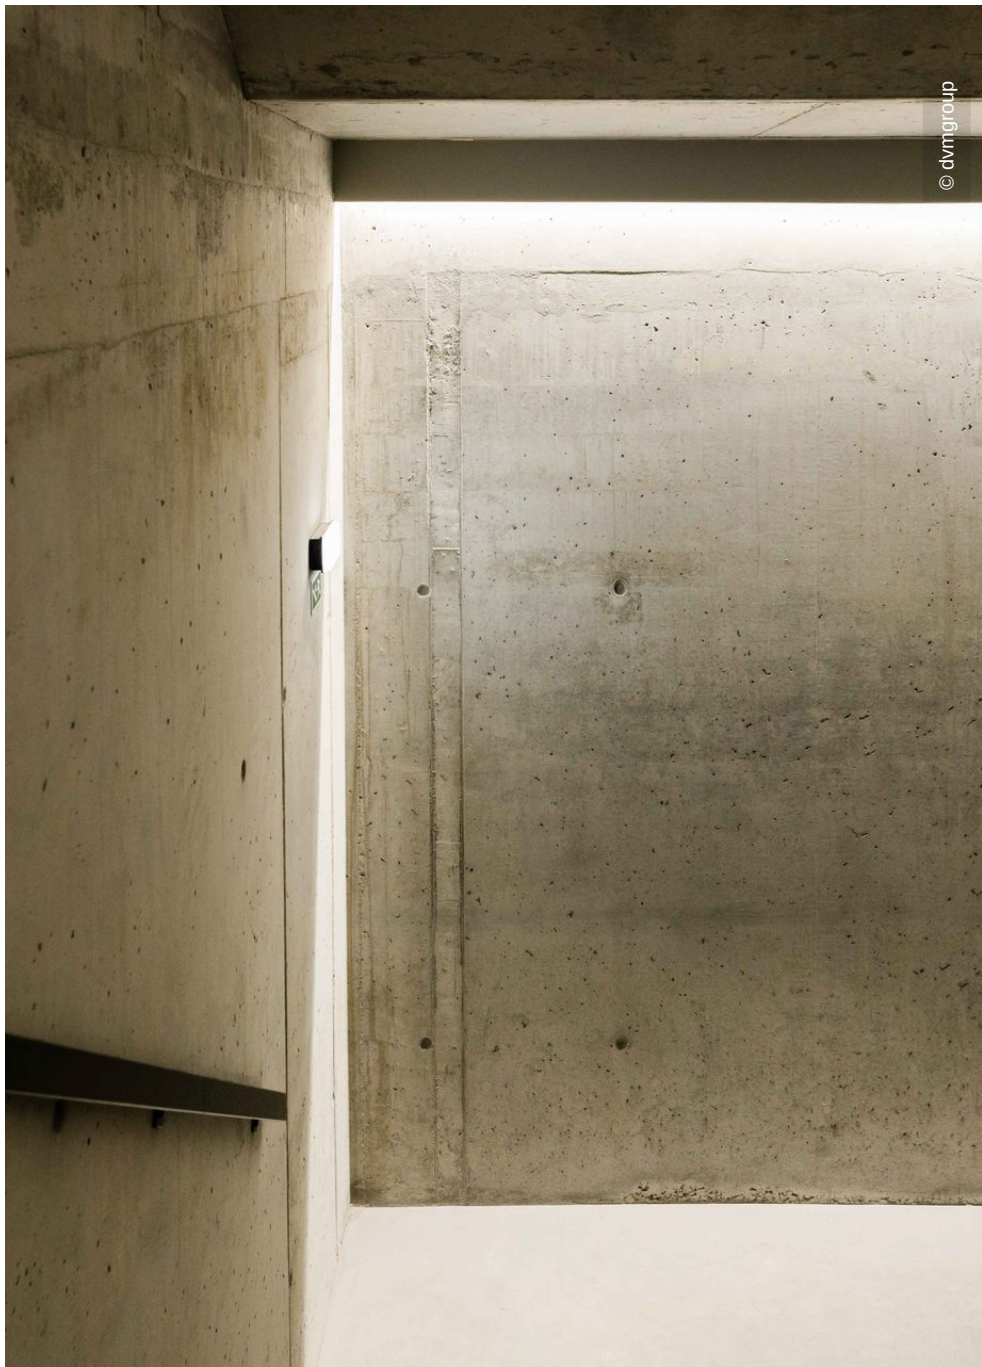

In addition to the floor system, 2,000 m² of expanded metal ceilings were also supplied by Lindner. These are manufactured environmentally friendly and resource-saving. The special ceilings integrate ideally into the modern interior design.

Completed Works

- **Floors**
 - Chipboard panels
LIGNA 24500 sqm
- **Ceilings**
 - Expanded Metal Ceilings
LMD-St 312 2000 sqm
