

BBRZ

Wiener Neustadt, Austria

Project Description

The vocational training and rehabilitation center, BBRZ for short, was completed in mid-2021 in the heart of Wiener Neustadt. In order to provide future-oriented vocational rehabilitation, a well thought-out spatial concept combined with modern equipment was developed in the newly built Bahnhofscity!

The BBRZ can now be found on two of a total of six floors of the building, which also houses stores, offices and surgeries.

Lindner was commissioned for the raised floor systems, hollow floor systems and floor coverings. With our sustainable, environmentally certified flooring systems, we are a perfect match for this modern facility.
