## Project Description

To improve the reception of passengers on intercontinental flights and meet current standards, Geneva Airport's long-haul terminal from 1975, which was supposed to be only provisional, was replaced by a new pier, the so-called 'East Wing'. Designed for wide-bodied aircraft and connections outside the Schengen area, the east wing helps to strengthen the airport's international presence. The new handling areas have a modern infrastructure and improved security for flight operations.

Lindner SE's Swiss branch in Opfikon supplied and installed various floor systems in the so-called "Aile Est". Covering almost 13,000 m<sup>2</sup>, the FLOOR and more<sup>®</sup> hollow floor system provides space for important installations and cables, as well as effective fire and smoke protection. The NORTEC raised floor made of calcium sulphate also ensures a high load-bearing capacity and excellent sound insulation. All Lindner flooring systems installed have a Cradle to Cradle Certified<sup>®</sup> Silver certificate and therefore support the sustainable construction of the building with circular products.

## General

<b>Building Type</b>	Airports
<b>Company Division</b>	Lindner SE   Branch Opfikon
<b>Completion</b>	2019 - 2021
<b>Architect</b>	RSHP
<b>Client</b>	HRS Real Estate AG

## Completed Works

- **Floors**

Calcium sulphate panels  
FLOOR and more<sup>®</sup>  
NORTEC

12913 sqm  
2153 sqm
